

## Stereomicroscope

The SM3A stereomicroscope is very suitable for small animal surgery. It is a complete, affordable and easy to use compact stereomicroscope with a small footprint.

The StereoMaster 3, SM3A is a complete, economical system suitable for small animal surgery. It includes a 45° binocular head, one pair of 10 x eyepiece, integral 12V 10W tungsten spot illumination and three interchangeable objectives. These objectives provides magnifications of 10x, 20x and 35x.

It has an articulated long arm stand with 280mm reach, which is at least 23mm longer than standard. The arm is adjustable in height and rotation through 180°, with an adjustable viewing angle. The anti reflection coated lenses provides crisp and upright 3D images.

The well designed and sturdy construction provides a long working life. The SM3A has a small footprint and can easily be used on most workplaces.
